Jordan Cove LNG Approval for Pre-Filing Granted

Coos Bay, OR – The Federal Energy Regulatory Commission (FERC) today approved Jordan Cove LNG’s pre-filing application, clearing the way for the liquefied natural gas (LNG) export project to move through the federal permitting process. The proposed multi-billion dollar project also includes the Pacific Connector Gas Pipeline that will run northwest from Malin, Oregon to the Jordan Cove LNG facility at the Port of Coos Bay.

“We have invested more than a decade in optimizing the engineering design and minimizing our environmental footprint through scientific analysis and community feedback,” said Betsy Spomer, CEO of Jordan Cove LNG. “We are confident Jordan Cove will receive regulatory approval and contribute significant direct and indirect benefits to southern Oregon.”

The project would be the largest single private investment in the history of southern Oregon, generating hundreds of million of dollars in payments and tax revenue for Coos, Douglas, Jackson and Klamath Counties throughout construction and operation. In addition, the Jordan Cove project will create thousands of family-sustaining local construction jobs and creates hundreds of high paying permanent positions.

The natural gas pipeline will provide new gas supply access for southern Oregon to enjoy the same opportunity for cleaner and cheaper natural gas that more populated areas of the state enjoy today, including communities that currently do not have access to gas and rely on burning wood and more expensive forms of energy.

Jordan Cove is communicating with FERC to schedule open houses, which will provide the public the opportunity to learn more about the project, ask questions, and meet Jordan Cove and Pacific Connector personnel. Once confirmed with the FERC, the locations and dates of these open house will be posted on the Jordan Cove website and advertised in local newspapers.
